Alert notifications as Email, Teams, Slack messages	✓	✓	✓
Generate graphical reports with top hosts, application protocols, etc.	✓	✓	✓
Identify attackers and victims through alerts dashboard in real-time and in the past	✓	✓	✓
Asset & User Management	✓	✓	✓
Identify attackers and victims in real-time and in the past	✓	✓	✓
IPFIX based monitoring	✓	✓	✓
FlowAnalyzer with Deep Packet Inspection (DPI)	No	✓	✓
Multi-site (distributed)	1	Limited*	✓
One-touch installation (AWS / on-premise)	✓	✓	✓
Premium technical support	✓	✓	✓
Number of interfaces	10 to 250	>100	>250

Notes:

* Limited To 3 Sites

Detailed Use Cases

Case Studies

Network Performance Monitoring

Monitor Your Entire Global Network Infrastructure To Ensure Your Digital Business Is Delivering Expected Performance. With Cloudmon You Have Visibility Into All Network Traffic. This Makes It Easy To

Manage The Network Infrastructure Effectively And Troubleshoot Issues Whether On-Premise, In Public Cloud, And In Hybrid Environments.

Using Real-Time Packet Acquisition And Multi-Stage Analytic Processing, Veryx Cloudmon Ntm Delivers Powerful Capabilities, Such As Congestion Detection, And Decoding Of More Than 200 Applications.

With A Holistic View Of Network, Plus The Ability To Contextually Drill Into Domain-Specific Details, Using Cloudmon Ntm, Businesses Are Able To Reduce The Number Of Hand Offs Between It Domain Groups And Drastically Improve Resolution Time For Application And Network Outages.

Usage Monitoring

Monitor Top Users, Conversations Etc. And Understand How Network Bandwidth Is Being Used. This Could Help In Better Allocation Of Bandwidth And Priority, While Also Planning For Required Capacity Upgradation.

While Over-Utilization By Certain Classes Of Users Could Be Flagged, Low Traffic Could Point To Potential Problems Such As Congestion And Losses. Either Way, Cloudmon Ntm Enables Network Administrators To Get A Moment By Moment Understanding Of Network Traffic Across The Enterprise.
