Cloudmon Network Traffic Monitoring (Ntm)

As Businesses Grow, Network Infrastructure Growth Across Physical, Virtual And Cloud, More Often Than Not Are Bound To Result In Complexity And In-Efficiency. The Very Mission Critical Infrastructure That Should Help Businesses Realize The Benefits Of Digital Transformation And Innovation, Often Plays Spoil-Sport Because Of Unknown Problems Lurking In The Network And The Resulting Performance And Availability Challenges.

Cloudmon Network Traffic Monitoring (Ntm)

As Businesses Grow, Network Infrastructure Growth Across Physical, Virtual And Cloud, More Often Than Not Are Bound To Result In Complexity And In-Efficiency. The Very Mission Critical Infrastructure That Should Help Businesses Realize The Benefits Of Digital Transformation And Innovation, Often Plays Spoil-Sport Because Of Unknown Problems Lurking In The Network And The Resulting Performance And Availability Challenges.

Added to that, post Covid-19, new challenges have emerged:

Majority Of The Work-From-Home (Wfh) Workforce Access Enterprise It Infrastructure Remotely – Either Through Virtual Private Networks (Vpns) Or Other Zero Trust Network Technologies, Reducing The Efficiency And Effectiveness Of Current Network Architectures

Dramatic Increase In Group Video Conference Usage And Resulting Bottlenecks, Resulting In Application Performance Requirements And Customer Experience Kpis Are Not Being Met

With Veryx Cloudmon Ntm, Enterprise Businesses Get 100% Network Visibility And Analytics Of All Traffic Across Their Mission Critical Infrastructure – Whether On-Premise Or Cloud, Enabling Better Control And Realization Of The Power Of Digital Innovation, At A Fraction Of The Cost Of Competing Solutions.

Cloudmon Ntm Provides Qos Measurements Like Latency And Jitter Based On Passive Monitoring. However, When There Is No Traffic Flow Occuring, It Will Not Be Possible To Make These Measurements In The Absence Of Data. Thus For Network Performance Monitoring Of Mission Critical Networks, We Recommend Using [Veryx Cloudmon Itim](#), Since It Performs Performance Monitoring Using Synthetic Traffic For Network And Ip Endpoints.

Cloudmon Network Traffic Monitoring Case Studies

Enterprise

Key Benefits Of Cloudmon Ntm

1. **See your network traffic** - Monitor network usage and performance
2. **Improve user experience** – Know and prevent potential bottlenecks early before users complain
3. **Flexibility & control** – Licensed in pay-you-go model without long term contracts and hidden fees. Available both for Cloud and on-premise.

Why Cloudmon Ntm?

See

Gain full visibility into traffic and network usage by users globally.

Know

Identify potential bottlenecks early to take pro-active remedial actions against performance degradation.

Solve

Contextually drill into domain-specific details and drastically improve resolution time for network performance issues.

Ready To Get Started?

Subscribe In Aws Marketplace (14-Day Trial) Or Run On-Premise

Recommended Companion Products

Cloudmon Dem

Monitor user desktops/laptops for application experience to troubleshoot:

- Device
- Connectivity
- Applications

[Explore](#)

Cloudmon Itim

Monitor health and performance of your IT Infrastructure:

- Servers (Physical/virtual/Cloud)
- Network devices
- IP endpoints
- User hosts
