

BRIGHTVUE-NDR Case Study: Education

Securing IT across physical campuses and virtual classrooms

An educational institution was concerned about increased cyber-risk incidents affecting IT resources as well as by students and faculty devices, as its courses contents were being increasingly delivered virtually.

Challenges:

- Inability to address large number of security incident warnings
- Less control on student end-point devices connecting remotely from less secure networks
- Handling security threats across diverse applications and infrastructure

BrightVue-NDR helped address key security risks in a comprehensive manner, with reduced incident noise.

Outcomes:

- Complete visibility of usage, traffic and threats from a single tool
- Proactive monitoring for threat vectors

“BrightVue-NDR gives full visibility and effective responsiveness to IT security risks and incidents across our campuses.”

- Network Administrator
