

BRIGHTVUE-NDR Case Study– Retail

Securing IT across HQ and Remote Branch locations

The CIO of a retail company that offered both brick-and-mortar and online shopping, wanted to ensure full visibility and security of its IT assets spread across its locations.

Challenges:

- While the larger branch locations were connected over SD-WAN, many of smaller branches (>60%) were connected over less secure internet using broadband links
- IT team was unable to effectively determine key risks and prioritize responses based on alerts

BrightVue-NDR helped reduce incident noise and address key risks and anomalies in an efficient manner

Outcomes:

- Full visibility of traffic and threats from a single tool
- Triage based on priority of threat vectors

“With BRIGHTVUE-NDR we have been able to gain full visibility and correlation of incidents.” – CIO
